

Dear Customer:

The China ceramic industry has a long and proud history of producing ceramics. China is the number # 1 Ceramics making country in the entire world. They have been making ceramics for over 5,000 years.

In recent years, China's ceramic industry developed rapidly and now produces 70% of the world's total output of ceramic products. The output of daily ceramics, building ceramics, and sanitary ceramics is ranked number one in the world, and the export of ceramic products continues to increase each year.

In the forthcoming 10 to 15 years, the sales of daily ceramics of China will maintain a steady growth and building ceramic and sanitary ceramic will see a considerable market as well. As the research and application for hi-tech ceramics in China are still at the beginning phase, the related market prospect is very promising.

It takes 22 days to make and complete each and every piece of Xtrema cookware. Every piece is handcrafted and it takes these artisans years and years to develop the skill and technique to make our Xtrema products. The Chinese artisans have been handcrafting ceramics for over 5,000 years and we believe in providing the consumer with the very best in product quality and that is why we decided to have our product made where the finest ceramics in the world are made and that is in mainland China.

Our Xtrema ceramic products are 100% Green, 100% Non Toxic, 100% Safe, 100% Healthy and they contain no PTFE coating or produce no PFOA gas or odors. We have independent worldwide labs testing our products all the time and we guarantee our products health and safety. We have done extensive leaching tests on our cookware. We leach no lead and cadmium or any heavy metals of any kind. Please go our website www.ceramcor.com to view our product test results.

Our Cookware is the Healthiest cookware on the Planet.

Thank you so much for inquiring about our Xtrema products and we hope that you enjoy your Xtrema cooking experience.

God's Blessings to you and your family,

Richard Bergstrom
